EDUCATION

University of Maryland

B.S. in Computer Science & Mathematics (GPA: 3.534 / 4.0)

May 2027 Expected

College Park, MD

- **Honors:** CS Departmental Honors, Dean's List
- **Coursework:** Computer Networks, Database Design, Compilers, Design & Analysis of Computer Algorithms, Advanced Data Structures, Computer Vision, Advanced Calculus I/II, Linear Algebra, Probability Theory

EXPERIENCE

Easy Dynamics Corp

Software Engineer Intern

Jun. 2026 – Present

McLean, VA

- Built a multi-region Azure network foundation in Terraform across two-week sprints, provisioning hub-and-spoke VNets, flow logging, and per-region diagnostics with input validation for region support, CIDR overlaps, and subnet containment, verified by Terraform tests in a plan-only CI gate.
- Automated IaC release workflows with CI/CD pipelines, promoting Terraform modules from source repositories into an internal artifact registry and eliminating manual release drift.
- Validated reusable Terraform modules across multiple Azure regions against NIST 800-53 and federal compliance standards, documenting severity-rated gaps and recommendations adopted by module maintainers and platform architects.

MindGrasp

Software Engineer (Part-time)

Oct. 2025 – May 2026

Bethesda, MD

- Built a retrieval and context-construction layer (RAG) for an internal customer support application, assembling relevant ticket and knowledge-base context to auto-draft agent replies.
- Implemented a multi-step agentic workflow with tool calling to gather and refine context across sources, reducing manual editing time by 28% across ~60 drafts per week.
- Refactored a monolithic Flask backend into modular blueprints with shared middleware and centralized error handling; reviewed 10+ pull requests as the primary technical reviewer on the codebase.

EchoIT

Software Engineer

Jul. 2023 – Aug. 2025

Seoul, South Korea

- Reduced P95 API latency by 85% (200ms to <30ms) by implementing a Redis cache-aside layer, achieving a 92% cache hit rate and significantly decreasing database load during peak traffic.
- Engineered an SMS verification service with RabbitMQ handling 5,000 messages/min, ensuring reliable asynchronous processing with average task time under 50ms.
- Developed and maintained 15+ full-stack features for a B2B platform using Java (Spring Boot) and MariaDB, owning the lifecycle from schema design to frontend implementation with jQuery.
- Built reusable microservice components in a Node.js backend framework and prototyped Elasticsearch integration for search; deployed through a Jenkins and Docker CI/CD pipeline.

SKILLS

- **Languages:** C++, Java, Python, JavaScript/TypeScript, SQL, C, Bash/Shell, Rust, OCaml
- **Backend & Web:** Spring Boot, Node.js, Express.js, Flask, React, REST APIs, RabbitMQ, Elasticsearch
- **Databases:** PostgreSQL, MySQL, Redis, MariaDB, MongoDB, SQLite
- **Cloud & DevOps:** Microsoft Azure, Terraform, Docker, Jenkins, GitHub Actions, CI/CD, Git, Linux/Unix
- **Certifications:** HashiCorp Terraform Associate (004), Microsoft Azure Fundamentals (AZ-900)
